This streamlined service (eliminates anxious wait times for patients and means GPs and patients can bypass the first visit to a specialist and be admitted directly to hospital insert copy here insert copy here insert copy here insert copy here insert copy here insert copy here

## S.O.S. (SAVE OUR SKIN)

One Minute Skin Quiz

*Email us today or ask our GPL for Dr Nguyen's Complimentary Mole Guide for your patients.*

Can your patients tell which of these moles is cancerous?

Answer: E and G are melanoma moles.

## MELANOMA IN AUSTRALIA FACTS

- Australia has the ignominious distinction of having the world's highest rate of skin cancer and those who live on beaches are even at greater risk.
- While the overwhelming majority of melanomas are diagnosed at an early stage and early stage diagnosis has above 90% survival rate; the survival rate for advanced melanomas is still only 10 per cent. Today one Aussie dies every five hours from melanoma and the incidence is on the rise. There has also been an increase in melanoma deaths in the past four years from 1467 in 2014 to 1905 in 2018.
- However promising new treatments are on the horizon with immunotherapy recently doubling survival rates in late stage melanoma patients.
- In December 2017 another new study in mice found that combining the drugs Selumetinib with the immunosuppressive drug approved for rheumatoid arthritis (leflunomide), completely halted the tumour over a 12 day period. This far outstipped the effect of either drug used in isolation, the research reported in Oncotarget found.

## NEXT GP EVENT

Wednesday September 12.  
Sign up for our next GP Education event at Brisbane Waters Private Hospital  
Please text our GPL on 0444 444 333 to secure your place.
